

# Nguyễn Tuấn Kiệt

Full-stack Developer

**Dob:** 18/07/2002

**Gender:** Male

**Phone:** 0976365791

**Email:** ntkiet.work@gmail.com

**Portfolio:** <https://ntk-portfolio-one.vercel.app/>

**Github:** <https://github.com/TuanKiettt>

**Address:** Thong Tay Hoi Ward , Ho Chi Minh City

## OBJECTIVE

Computer Science graduate with practical experience in full-stack web development using ReactJS, Next.js, Node.js, and REST APIs. Skilled in building and deploying applications featuring authentication, real-time communication, database management, and AI integration. Demonstrates strong problem-solving abilities, a proactive learning approach, and independent work capacity. Seeking a Full-stack Developer role to contribute to impactful projects and advance technical expertise.

## EDUCATION

2020 - 2026      **UNIVERSITY OF THE WEST OF ENGLAND BRISTOL**  
COMPUTER SCIENCE  
Second Class Honours (Upper Division)

## SKILLS

|                 |                                                                         |
|-----------------|-------------------------------------------------------------------------|
| Languages       | Java, Javascript, TypeScript, C#,                                       |
| Frontend        | HTML, CSS, ReactJS, Next.js                                             |
| Backend         | Java (REST API, OOP), NextJS (ExpressJS), Node.js, .Net, JWT, WebSocket |
| Database        | MySQL, SQL, PostgreSQL                                                  |
| Version Control | Github                                                                  |

## WORK EXPERIENCE

|                 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|-----------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 5/2025 - 7/2025 | <b>New Ocean Information System</b><br><b>Web Developer Intern</b> <ul style="list-style-type: none"><li>• Developed and maintained web application features based on assigned business and user requirements.</li><li>• Analyzed requirements and translated them into functional UI and technical solutions.</li><li>• Organized project structure and source code by functionality to improve maintainability and future development.</li><li>• Worked under team leader supervision and completed assigned tasks according to project requirements and deadlines.</li><li>• Identified and resolved implementation issues during the development process.</li><li>• Collaborated with team members to clarify requirements and ensure features met expected outcomes.</li></ul> |

## PROJECTS

|                 |                                                                                                                                                                                                          |
|-----------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 3/2026 - 6/2026 | <b>Task Management System with AI Assistant (TuanKiettt/ai_task_management_system)</b><br><b>Team size: 1 - Full-stack</b><br><b>Technologies:</b> ReactJS, TailwindCSS, Node.js, JWT, WebSocket, Python |
|-----------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

- Designed a task management platform based on common user needs for personal and team task management.
- Analyzed user requirements and translated them into functional features such as task creation, workspace management, team collaboration, notifications, and AI-assisted task generation.
- Designed system workflows and database structures to support task and team management.
- Developed real-time communication functionality using WebSocket.
- Integrated an AI-assisted feature to help users generate to-do lists through natural language interaction.
- Identified potential usability issues and adjusted the system workflow to improve the user experience.
- Managed the project development process from requirement analysis, system design, implementation, testing, and deployment.

3/2026 - 6/2026

**E-commerce platform (TuanKiettt/WAD: e-commerce platform)**

**Team size: 1 - Full-stack**

**Technologies:** ReactJS, TailwindCSS, Node.js, JWT

- Designed an e-commerce platform for buying, selling, and exchanging electronic products.
- Analyzed different user roles and business requirements, including **BUYER, SELLER, and ADMIN**.
- Designed user flows and system functions based on different user permissions and responsibilities.
- Developed product management, user management, authentication, and role-based access control features.
- Designed an administration interface to support user and system management.
- Identified functional requirements and translated them into implementable technical solutions.
